How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) Michael J. Campbell, Stephen J. Walters
A complete guide to understanding cluster randomised trials

Written by two researchers with extensive experience in the field, this book presents a complete guide to the design, analysis and reporting of cluster randomised trials. It spans a wide range of applications: trials in developing countries, trials in primary care, trials in the health services. A key feature is the use of R code and code from other popular packages to plan and analyse cluster trials, using data from actual trials. The book contains clear technical descriptions of the models used, and considers in detail the ethics involved in such trials and the problems in planning them. For readers and students who do not intend to run a trial but wish to be a critical reader of the literature, there are sections on the CONSORT statement, and exercises in reading published trials.

- Written in a clear, accessible style
- Features real examples taken from the authors' extensive practitioner experience of designing and analysing clinical trials
- Demonstrates the use of R, Stata and SPSS for statistical analysis
- Includes computer code so the reader can replicate all the analyses
- Discusses neglected areas such as ethics and practical issues in running cluster randomised trials

How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research provides an excellent reference tool and can be read with profit by statisticians, health services researchers, systematic reviewers and critical readers of cluster randomised trials.

From reader reviews:

Sheila Walker:

Do you have favorite book? Should you have, what is your favorite's book? E-book is very important thing for us to learn everything in the world. Each publication has different aim or perhaps goal; it means that book has different type. Some people feel enjoy to spend their the perfect time to read a book. They can be reading whatever they consider because their hobby is reading a book. Consider the person who don't like studying a book? Sometime, man or woman feel need book if they found difficult problem or exercise. Well, probably you will want this How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice).

Sherry Stevens:

Here thing why this How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) are different and reputable to be yours. First of all reading through a book is good but it really depends in the content of computer which is the content is as scrumptious as food or not. How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) giving you information deeper and in different ways, you can find any reserve out there but there is no guide that similar with How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice). It gives you thrill looking at journey, its open up your personal eyes about the thing which happened in the world which is maybe can be happened around you. You can bring everywhere like in recreation area, café, or even in your way home by train. For anyone who is having difficulties in bringing the published book maybe the form of How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) in e-book can be your substitute.

Beverly Hummell:

The reason why? Because this How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health Related Research (Statistics in Practice) is an unordinary book that the inside of the book waiting for you to snap this but latter it will jolt you with the secret the idea inside. Reading this book adjacent to it was fantastic author who have write the book in such remarkable way makes the content interior easier to understand, entertaining method but still convey the meaning entirely. So , it is good for you because of not hesitating having this any more or you going to regret it. This amazing book will give you a lot of rewards than the other book have such as help improving your ability and your critical thinking method. So , still want to hold up having that book? If I ended up you I will go to the guide store hurriedly.

Sharon Edwards:

The book untitled How to Design, Analyse and Report Cluster Randomised Trials in Medicine and Health

Related Research (Statistics in Practice) contain a lot of information on it. The writer explains the woman idea with easy way. The language is very clear and understandable all the people, so do not necessarily worry, you can easy to read it. The book was compiled by famous author. The author provides you in the new time of literary works. You can read this book because you can read more your smart phone, or device, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can open up their official web-site along with order it. Have a nice read.
