A Course in Topological Combinatorics (Universitext) Mark de Longueville

A Course in Topological Combinatorics is the first undergraduate textbook on the field of topological combinatorics, a subject that has become an active and innovative research area in mathematics over the last thirty years with growing applications in math, computer science, and other applied areas. Topological combinatorics is concerned with solutions to combinatorial problems by applying topological tools. In most cases these solutions are very elegant and the connection between combinatorics and topology often arises as an unexpected surprise.

The textbook covers topics such as fair division, graph coloring problems, evasiveness of graph properties, and embedding problems from discrete geometry. The text contains a large number of figures that support the understanding of concepts and proofs. In many cases several alternative proofs for the same result are given, and each chapter ends with a series of exercises. The extensive appendix makes the book completely self-contained.

The textbook is well suited for advanced undergraduate or beginning graduate mathematics students. Previous knowledge in topology or graph theory is helpful but not necessary. The text may be used as a basis for a one- or two-semester course as well as a supplementary text for a topology or combinatorics class.

From reader reviews:

Katrina Frey:

Book is to be different for every grade. Book for children until eventually adult are different content. As it is known to us that book is very important for all of us. The book A Course in Topological Combinatorics (Universitext) seemed to be making you to know about other knowledge and of course you can take more information. It is very advantages for you. The guide A Course in Topological Combinatorics (Universitext) is not only giving you much more new information but also to be your friend when you feel bored. You can spend your own personal spend time to read your guide. Try to make relationship with all the book A Course in Topological Combinatorics (Universitext). You never really feel lose out for everything in the event you read some books.

Steven Peterson:

Do you have something that you want such as book? The book lovers usually prefer to pick book like comic, quick story and the biggest one is novel. Now, why not attempting A Course in Topological Combinatorics (Universitext) that give your fun preference will be satisfied through reading this book. Reading behavior all over the world can be said as the way for people to know world considerably better then how they react toward the world. It can't be stated constantly that reading addiction only for the geeky person but for all of you who wants to end up being success person. So , for all you who want to start examining as your good habit, you may pick A Course in Topological Combinatorics (Universitext) become your current starter.

Daniel McDonald:

This A Course in Topological Combinatorics (Universitext) is great e-book for you because the content that is certainly full of information for you who else always deal with world and get to make decision every minute. This book reveal it info accurately using great organize word or we can point out no rambling sentences inside. So if you are read the idea hurriedly you can have whole information in it. Doesn't mean it only provides you with straight forward sentences but tricky core information with lovely delivering sentences. Having A Course in Topological Combinatorics (Universitext) in your hand like having the world in your arm, facts in it is not ridiculous one. We can say that no publication that offer you world with ten or fifteen moment right but this book already do that. So , this is good reading book. Hello Mr. and Mrs. active do you still doubt this?

Tamela Campbell:

Reading a book to get new life style in this 12 months; every people loves to examine a book. When you examine a book you can get a lot of benefit. When you read publications, you can improve your knowledge, simply because book has a lot of information in it. The information that you will get depend on what sorts of book that you have read. If you want to get information about your review, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this sort of us novel, comics, and

also soon. The A Course in Topological Combinatorics (Universitext) will give you new experience in reading through a book.
