Time-Triggered Communication (Embedded Systems)

Time-Triggered Communication (Embedded Systems)

Time-Triggered Communication helps readers build an understanding of the conceptual foundation, operation, and application of time-triggered communication, which is widely used for embedded systems in a diverse range of industries. This book assembles contributions from experts that examine the differences and commonalities of the most significant protocols including: TTP, FlexRay, TTEthernet, SAFEbus, TTCAN, and LIN.

Covering the spectrum, from low-cost time-triggered fieldbus networks to ultra-reliable time-triggered networks used for safety-critical applications, the authors illustrate the inherent benefits of time-triggered communication in terms of predictability, complexity management, fault-tolerance, and analytical dependability modeling, which are key aspects of safety-critical systems. Examples covered include FlexRay in cars, TTP in railway and avionic systems, and TTEthernet in aerospace applications. Illustrating key concepts based on real-world industrial applications, this book:

- Details the underlying concepts and principles of time-triggered communication
- Explores the properties of a time-triggered communication system, contrasting its strengths and weaknesses
- Focuses on the core algorithms applied in many systems, including those used for clock synchronization, startup, membership, and fault isolation
- Describes the protocols that incorporate presented algorithms
- Covers tooling requirements and solutions for system integration, including scheduling

The information in this book is extremely useful to industry leaders who design and manufacture products with distributed embedded systems based on time-triggered communication. It also benefits suppliers of embedded components or development tools used in this area. As an educational tool, this material can be used to teach students and working professionals in areas including embedded systems, computer networks, system architectures, dependability, real-time systems, and automotive, avionics, and industrial control systems.

From reader reviews:

Laura Dupont:

The book Time-Triggered Communication (Embedded Systems) make you feel enjoy for your spare time. You need to use to make your capable a lot more increase. Book can to become your best friend when you getting pressure or having big problem along with your subject. If you can make reading through a book Time-Triggered Communication (Embedded Systems) for being your habit, you can get a lot more advantages, like add your own personal capable, increase your knowledge about a few or all subjects. You could know everything if you like start and read a book Time-Triggered Communication (Embedded Systems). Kinds of book are a lot of. It means that, science reserve or encyclopedia or some others. So , how do you think about this book?

June Hargrove:

What do you concerning book? It is not important to you? Or just adding material if you want something to explain what your own problem? How about your spare time? Or are you busy man or woman? If you don't have spare time to try and do others business, it is gives you the sense of being bored faster. And you have spare time? What did you do? Everyone has many questions above. The doctor has to answer that question due to the fact just their can do that. It said that about reserve. Book is familiar in each person. Yes, it is appropriate. Because start from on pre-school until university need this particular Time-Triggered Communication (Embedded Systems) to read.

Mary Alejandro:

Nowadays reading books be than want or need but also become a life style. This reading addiction give you lot of advantages. Advantages you got of course the knowledge your information inside the book in which improve your knowledge and information. The information you get based on what kind of guide you read, if you want have more knowledge just go with training books but if you want truly feel happy read one with theme for entertaining for instance comic or novel. Typically the Time-Triggered Communication (Embedded Systems) is kind of publication which is giving the reader unforeseen experience.

Thelma Cobb:

The book untitled Time-Triggered Communication (Embedded Systems) contain a lot of information on it. The writer explains your girlfriend idea with easy way. The language is very easy to understand all the people, so do certainly not worry, you can easy to read the item. The book was authored by famous author. The author will bring you in the new era of literary works. You can actually read this book because you can please read on your smart phone, or model, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can open up their official web-site along with order it. Have a nice learn.
